

The Caudon Badger Gate from wildlifefencing.co.uk

Most Secure Badger Gate on the Market

The Caudon Badger Gate has been developed over many years and been through many design iterations, responding to real-life trials feedback from consumers, ecologists and our own experience as badger mitigation contractors. We believe this is our most secure version yet and the best badger exclusion gate available on the market.

Designed for strength, security, durability and reliability on badger sett exclusion projects.

The gate can be locked fully, locked in the one-way position to prevent entry or left to swing freely so that badgers can get used to passing through in both directions before one-way lockdown.

All frame and gate flap components have been laser cut to ensure an excellent fit between gate flap & frame. Along with keeping any gap tolerances to a minimum, the gate flap has a rolled anti-claw edge. This results in a gate with minimal grab potential to prevent badgers clawing a gate open, gaining re-entry into a sett, and potentially causing costly project delays.

Specifications

- Laser cut 3mm galvanised steel with 750x12mm Ø legs
- Dimensions: Frame 400x330mm / Opening 295x220mm.
- Lock mech bolts – M8 20mm Hex flange head (13mm spanner req.)

Key Features

- Rolled edge gate flap and closer gate/frame gap to prevent clawing open.
- Larger tie-in holes for ease of fixing to chain link or surrounding badger-proof ground covering.
- Improved lock bar design eliminating gate bounce.
- Innovative Sliding leg design for easy positioning and installation.
- Storage position for full lockdown bolt when not in use.
- Improved finish, eliminating sharp edges for handling. Laser cut manufacturing.
